

Feed Management Systems

Feed Manager Feed Inventory System

Hired-Hand's all new Feed Manager (FM-4) has changed the way a grower manages feed inventories. A feed level management system much less costly than Load Cell Systems has finally arrived. This stand alone feed management controller can interface with up to 4 ultra-sonic feed sensors that each have the ability to monitor feed level as well as capacity. Several key features set the Feed Manager apart from any other feed system on the market including a low capacity alarm that will sound if feed level reaches a user-defined low limit. In addition, a user-friendly visual interface and 2 inputs for monitoring of cross-fill run times makes it clear that Hired-Hand is setting new standards in feed level management.

Feed Manager Features:

- monitors up to 4 ultrasonic feed level sensors to track feed inventory
- monitors up to 2 current sensors for tracking auger runtimes
- unit monitors up to 2 buildings
- contains minimum feed capacity alarm to warn of feed shortages
- contains maximum fill time alarm to protect against feed spills
- compatible with all feed bins
- displays feed level and feed capacity
- intuitive graphical interface
- english or metric units
- 120/240 vac 50/60 Hz
- pc compatibility allows units to be monitored via HHnet
- patent pending

UltraSonic Feed Sensors Features:

- measures feed levels in bins up to 30' tall
- easy installation
- no calibration required
- allows an inexpensive alternative to Load Cell Systems
- reliable operation
- mounts to all manufacturer's bins
- interfaces to Evolution 3000/3001 or the FM-4
- patent pending
