

# Mobile Hoop-House Systems for Pastures

POTTERS ARE LEADING SUPPLIERS OF POULTRY EQUIPMENT

WE CAN PROVIDE YOU WITH THE BEST STRUCTURES AND PROVEN DURABILITY FOR YOUR PASTURED LAYER OPERATIONS.

# Mobile Hoop-House Systems for Pastures

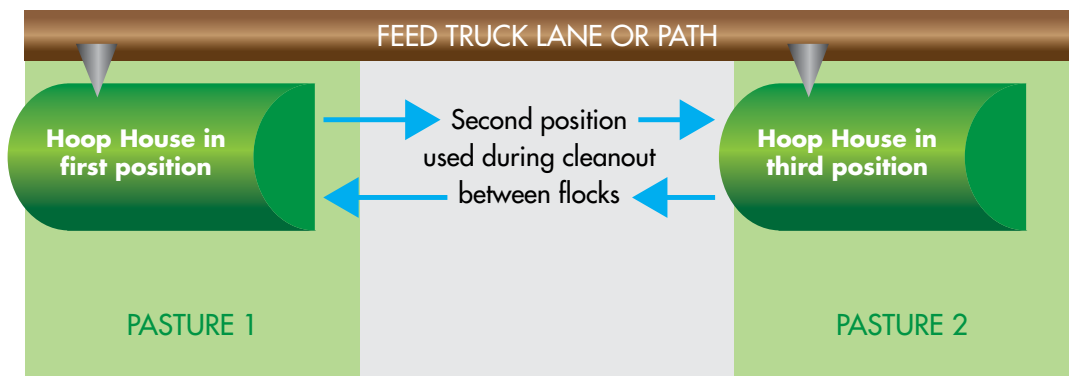

We have been building these types of mobile houses on farms across England for the last 20 years. This has given us the experience to know what buildings will stand the test of time, and which will not. Our nesting equipment is matched neatly within these structures.

All you will need are simple RV-type hook-ups for electricity and water. A cement pad is optional under your egg room and for your feed bin. Typically, eggs are flatted at the end of these hoop houses and taken to a main cooler.

Most farms use a 3-position pasture rotation – all in a row. Birds will remain on one pasture site for a flock cycle.

Then, the houses will be dragged using a tractor to their second position, a bit further down the pasture; where they will be cleaned thoroughly and sanitized. After that, the houses are dragged to the third position, even further down the pasture; to where the next flock will remain through their cycle.

At the end of the second cycle, they clean in the second position and replace the house on the first position as follows:

*There are multi position rotation possibilities.*

- Roll-up curtain sides for ventilation
- Nest top options – peaked or flat available
- Complete with control panel
- Tow kit comes standard with the building
- Potters' regular farm visits sharing technical expertise

Potters Poultry, Leigh Road, Swift Valley, Rugby CV21 1DS, United Kingdom
